(57) **ABSTRACT**

The present invention relates to a landscaper trellis that would feature basket hangers and a solar light incorporated into its design. The trellis would measure roughly 8 feet long and 8 feet high. The curved framework would consist of two lattice panels stretching between three support poles, and be made of a material comprising treated lumber, durable plastic, or a metal. The invention provides an attractive setting with the ability to hold planters, and provide lighting when necessary anywhere without requiring an external electrical source.
