[57] **ABSTRACT**

A device for supporting a hanging plant and for slowly rotating it to expose different sides to sunlight. The device comprises a cord for attachment at one end to a hook or other fixed object and for attachment at the opposite end to the plant. The cord extends in length and winds in one direction in response to an increase in the weight of the plant by feeding of water and contracts and winds slowly in an opposite direction as the water evaporates from the plant.
