[57] **ABSTRACT**

A hanging plant pot particularly for flowers, consists of a vessel which at the top has an encircling edge flange provided with anchoring openings for a releasable hooking of the vessel on suspension means e.g. bars, chains or straps. The openings have an oblong shape with a maximum dimension essentially oriented radially in relation to the vessel axis. At that end which is defined to enter the openings, the suspension means have a shaft part, the free end of which is provided with a pair of shoulders extending laterally in opposite directions from said shaft and which measured transversely to the shaft, have a total extension which is larger than the smallest one of the opening but at the utmost as large as the largest internal cross-section of the opening.
