[57] ABSTRACT

A plant hanger suitable for attaching to the rim of an upwardly positioned flower pot is disclosed. The plant hanger includes generally a plurality of strong, flexible, similar members, each of which terminates upwardly in an upper pot engaging hook. Each of the plurality of members terminates downwardly in a member interconnector of suitable configuration to retain a lower pot support therein. The plant hanger can be easily connected to an upper positioned pot by engaging rim portions of the upper pot with member connected hooks. When properly installed, the plant hanger member interconnector is positioned below and in axial alignment with the upper positioned pot to receive and support the hanger of a lower positioned pot.
